Thank you for purchasing an 8x4 GardenSaver Garden Shed with Double Doors. Please take the time to identify all the parts prior to assembly.

Please be aware that it is the customers’ sole responsibility to acquire the necessary building permits and or obtain approval from their local county, municipality or HOA prior to purchasing. Generally, shed structures under 100 square feet do not require permits in most jurisdictions in the United States and Canada.

- Snow load ratings vary by geographical location. If heavy or wet snowfall occurs, it is advisable to sweep snow off roof frequently.
- If the product is elevated, any structural and building code requirements are solely the customer’s responsibility, and should be abided by.
- In areas with high or gusty wind conditions, it is advisable to install the structure securely to the ground.
- Have a regular maintenance plan to ensure screws, doors, windows and parts are tightly affixed.

Customer agrees to hold Outdoor Living Today and any Authorized Dealers free of any liability for improper installation, maintenance and repair.

In the event of a missing or broken piece, call the Outdoor Living Today Customer Support Line @ 1-888-658-1658 within 30 days of the delivery of your purchase. It is our commitment to you to courier replacement parts, free of charge, within 10 business days of this notification. Replacement parts will not be provided free of charge after the 30 day grace period.

All structures purchased from Outdoor Living Today are covered for a period of one year for defects in manufacturing and workmanship. Costs incurred for customer installations are not included.

Failure to use supplied parts included in this kit could result in poor product performance and may void your warranty. Please contact Outdoor Living Today’s Customer Toll Free Line if you plan to deviate from our written instructions.
Thank you for purchasing our 8x4 GardenSaver Double Door Shed with Metal Roof. Please take the time to identify all the parts prior to assembly.

### Parts List:

**A. Floor Section**
- 1 - 45 ½" x 75" - Large Floor Frame (2 Joists unattached)
- 1 - 45 ¼" x 21" - Small Floor Frame (2 Joists ATTACHED)
- 2 - 1 ½" x 3 ½" x 71 7/8" - Floor Joists  
  *(Steps 1 - 2)*
- 5 - 1 ½" x 3 ½" x 45 ½" - Floor Runners  
  *(Steps 3 - 5)*
- 1 - 5/8" x 45 ½" x 75" - Plywood Flooring
- 1 - 5/8" x 45 ½" x 21" - Plywood Flooring  
  *(Steps 6 - 8)*

**B. Wall Section**
- 4 - 1 ½" x 2 ½" x 45 ½" - Wall Plates
- 4 - 45 ½" x 75" - Wall Panels
- 2 - 12" x 73" - Narrow Wall Panels  
  *(Steps 9 - 18)*
- 2 - 2" x 3 ½" x 6 ½" - Door Headers - Short (Dado on edge)
- 1 - 2" x 3 ½" x 78" - Door Header - Long  
  Dado cut on edge- Aluminum Support Strip Attached
- 2 - 1 ½" x 3 ½" x 73" - Door Jambs - Vertical  
  *(Steps 19 - 21)*
- 2 - Top Triangular Siding Pc for Angle Wall Extenders (L/R)
- 2 - 45 ¼" - Angle Wall Extenders (L/R)
- 2 - 9" x 45 ½" - Wall Extenders  
  *(Steps 22 - 28)*
- 1 - ¾" x 3 ½" x 70" - Horizontal Wall Cleat
- 1 - ¾" x 3 ½" x 21" - Horizontal Wall Cleat  
  *(Step 29)*

**C. Rafter & Roof Section**
- 6 - 1 ½" x 2 ½" x 54" - Rafters
- 2 - ½" x 3" x 48" - Front Soffit
- 2 - ½" x 3 ½" x 48" - Rear Soffit  
  *(Steps 31 - 36)*
- 1 - 3/4" x 3 1/2" x 26" - Roof Batten
- 1 - 3/4" x 3 1/2" x 74" - Roof Batten
- 4 - 3/4" x 3 1/2" x 50" - Roof Battens  
  *(Steps 37 - 40)*
- 2 - Facia Nailing Strips - ¾" x ¾" x 51"  
  *(Step 41)*
- 3 - Metal Roof Panels - 39" w x 55 1/2" d
- Foam Enclosures - Several Strips  
  *(Steps 42 - 46)*

**D. Miscellaneous Section**
*(Skirting, Trim, Door, Facia & Misc. Parts)*
- 6 - ¾" x 4 ¼" x 45 ¼" - Bottom Skirting (Bevel Siding)  
  *(Steps 47 - 50)*
- 8 - 7/8" x 2 ½" x 36" - Corner Filler Trims
- 2 - 7/8" x 2 ½" x 10" - Front Center Corner Filler Trims  
  *(Steps 51 - 53)*
- 2 - ½" x 3 ½" x 77 ½" - Vertical Door Trims  
  *(Steps 54 - 55)*
- 2 - ½" x 5 ½" x 79" - Rear Corner Trims
- 2 - ½" x 5 ½" x 88 ¼" - Front Corner Trims
- 2 - ½" x 2 ½" x 80" - Side Rear Corner Trims
- 1 - ½ x 2 ¼" x 79" - Rear Middle Trim
- 2 - ½" x 2 ½" x 88 ¾" - Side Front Corner Trims  
  *(Steps 56 - 59)*
- 1 - ½" x 2 ½" x 88 ¾" - Horizontal Door Trim
- 1 - ½" x 2 ½" x 8 ¾" - Front Middle Trim  
  *(Step 60)*
- 2 - 31 ½" X 72" - Full Doors  
  *(Steps 61 - 65)*
- 2 - ½" x 4" x 54 1/8" - Side Facia (Angle Cut Ends) - reverse
- 4 - ½" x 4" x 50 ½" - Front and Rear Facia  
  *(Steps 66 - 68)*
- 2 - 6" x 60" - Front Metal Drip Caps - angled  
  *(Step 69)*
- 1 - Rear Detail Facia Plate (4" high)  
  *(Step 70)*
- 2 - ½" x 4" x 28 7/8" - Upper Interior Door Trims
- 4 - ½" x 1½" x 35 7/8" - Side Interior Door Trims  
  *(Steps 71 - 72)*
- 1 - 1½" x 2 ½" x 6" - Upper Door Stop
- 1 - ¾" x 2 ½" x 64" - Lower Door Stop /Floor Threshold  
  *(Steps 73 - 74)*
- 1 - ½ x 2 ½" x 70" - Interior Vertical Door Flange  
  *(Steps 75 - 76)*
- 1 - 45 ¼" - Extra Piece of Bevel Wall Siding - Use if wall panel siding is damaged or to shim floor or door.

**Note:** All Trim, Facia and Bottom Skirting pieces will be positioned rough face out when installed.
8x4 GardenSaver DD-Metal HARDWARE PACKAGE

**Hardware Kit (Provided)**

- 2 1/2" Finishing Nail 168 Pcs.
- 1 1/4" Square Drive Bit 1/4" x 2" x 9
- 2" Metal Roof Screw 5/16 x 7/8" long 5 x 5
- 3/4" Metal Ridge Cap Screw x 2
- Black Headed 1/4" & 5/16" Nut Drivers

**Tools Required (Not Provided)**

- Hammer
- Screw Gun/Drill
- Tape Measure
- Wood Clamp
- Utility Knife
- Level
- Pliers
- Ladder
- 1/8" & 1/2" Drill Bits

**Safety Equipment Required (Not Provided)**

- Safety Glasses
- Work Gloves
What Can I Do Before My Shed Arrives?

Before starting your project become familiar with this assembly manual and determine if you can complete the project yourself or will require a professional contractor. Please note that certain counties and municipalities require building permits prior to installation. We recommend to all consumers that they check with their local county/municipality for these specifics prior to purchasing any of our products since this is your sole responsibility.

Prior to the product arriving, clear the construction area. Remove all debris; roots, grass, rocks, etc. Make sure the ground slopes away from the site at least 10 feet in all directions. If necessary, build up the soil in the center of the site and slope away for the high point to provide drainage. Fill in any low spots within the perimeter of the site. A slope of 1/8 inch per foot is enough to prevent water accumulation. We recommend excavating the site 4-6 inches deep and laying gravel or crushed rock where drainage may be a concern.

What type of foundation should I use?

**Patio Stone Foundation** : If the ground is stable and has sufficient drainage, you can set patio stones directly on firm compacted soil. If not, consider laying down sand and then gravel or crushed rock. Excavate the site making it about 12” wider and longer than the floor footprint. Excavate down approximately 4-6 inches deep. Lay 1-2 inches of sand first and then fill with 3-4 inches of gravel or rock for good drainage and support. Most of our sheds and playhouses include floors with support runners. Support each runner with 4-5 patio stones (less for smaller sheds). Patio stones can be anything from a mid size brick to a round or square 12” long by 1 1/2” thick stone. Place stones directly under the floor runners, check for level and adjust height as necessary. Having a solid and level foundation is the most critical piece of work you can do to make the project go smoothly. Most of this work can be done prior to your shed arriving!

**4x4 Pressure Treated Beam Foundation** : You can build directly on pressure-treated beams or railroad ties laid on a properly prepared construction site as mentioned above. Run beams perpendicular to floor runners. Use a 2x4 straight piece of lumber on edge and a carpenter's level to position correctly. To prevent the beams from shifting, secure them with ½ inch rebar inserted through holes drilled in the beams and driven 3 to 4 feet into the ground. Leave each side or end of the foundation open to promote drainage and air circulation beneath the floor. Consider using a wire mesh or equivalent to prevent pesky critters from gaining access on ends.

**Concrete - Slab Foundation** : Typically a slab 3-4 inches thick laid over a sub-base of 4 inches of gravel or crushed rock is sufficient but may vary depending on your geographic location. Using either mix your own concrete or having it delivered by truck, ready to pour, depends on how much time and effort you have to dedicate to the project. In any event, make sure you excavate the slab area to a depth 6 inches. This would put the finished slab surface approximately 2 inches above ground (remember you will be using 4 inches of gravel as your subbase). For example, a slab for our 8’x12’ SpaceMaker Shed will require approximately 1 cubic yard of premixed concrete.

For more detailed information on how to pour your concrete-slab foundation or any other questions regarding specifications, foundations and permits, please visit our website at [www.outdoorlivingtoday.com](http://www.outdoorlivingtoday.com) or call our Customer Support Line at **1-888-658-1658** to speak with a Product Representative.

* Please note that all measurements in our Detailed Assembly Manuals may be subject to change without notice. Please confirm exact foundation size with Outdoor Living Today if you have any concerns or questions.
A. Floor Section

Exploded view of all parts necessary to complete Floor Section. Identify all parts prior to starting. Note: Floor Footprint is 96” wide x 45 1/2” deep.

1. Lay out **Large Floor Joist Frame** and **2 Floor Joists** (1 1/2” x 3 1/2” x 72”) as illustrated above. Position Joists equally in Floor Joist Frame. Use **Small Floor Joist Frame** as a template to determine joist position. Position Joist so flush with framing.

2. When correctly positioned, attach each Joist with 4 - 2 1/2” screws (2 per end). **You can find the Square Drive Bit for the screws in with the Hardware Kit Bag.**
3. With Floor Joist Frames positioned together flush, attach with 6 - 2 1/2" screws.

4. Position and attach **Floor Runners** (1 1/2" x 3 1/2" x 45 1/2") to completed floor frames with 6 - 2 1/2" screws per Runner. Make sure Runners are flush with outside of floor framing but not overhanging. Make sure 4th Runner is placed equally over seam where floor frames meet.

5. With Floor Runners attached, carefully flip the floor over and place on your foundation. **Caution** - you may need 2 people to assist you. Be careful when laying floor down not to bend or twist floor. **Note:** The floor will be flipped over and floor runners will sit on your foundation. It is important to note that having a level foundation is critical. Choosing a foundation will vary between regions. Typical foundations can be concrete pads or patio stones positioned underneath the floor runners.

6. When in place, level floor completely before proceeding.

7. Position **Plywood Floor** pieces (2) on top of completed floor joists.
8. Position Plywood so it sits almost flush with outside of floor joist framing (see Note). When correctly positioned, attach to all floor joists with 1 1/4" screws. Use screws every 16".

B. Wall Section

Exploded view of all parts necessary to complete the Wall Section. Identify all parts prior to starting.

9. Locate 4 Solid Wall Panels and 4 Wall Plates (1 1/2" x 2 1/2" x 45 1/2"). Attach Plates to bottom of studs of each wall panel with 3 - 2 1/2" screws. Position so plates are flush with framing.

Note: Plywood is cut slightly smaller than floor framing. Keep plywood seams tight.

Important:
Pilot hole ALL 2x3 Wall Studs with 1/8" drill bit prior to screwing. This will make it much easier to attached together.
10. Starting on side, position a **Solid Wall Panel** on top of plywood floor. The Wall Panel bottom framing will sit flush with floor framing. Wall siding will overhang the floor. **Important:** Make sure all walls are aligned in their upright position. If not, water may leak into your shed. Unsure if panel is facing up or down? Recently attached Bottom Plate is on bottom of panel.

Do not align wall siding to floor. Align wall plate to outside of plywood floor.

Wall Plate Flush with plywood floor.

11. Outside 2x3 framing of wall panel should be flush with outside of floor framing when properly aligned. **Note:** Do not align wall siding to floor. Align wall plate to outside of plywood floor. When positioned correctly, locate 2nd Solid Wall Panel and place in corner.

**Optional** - Caulking seams will help prevent moisture from entering your shed. Caulking not included in kit.

12. Butt both vertical wall studs of side and rear walls together and attach with 3 - 2 1/2” screws. Screw at the bottom, middle and top of stud to secure properly. Have helper push wall framing together while securing to ensure tight fit. **Note:** Drill pilot holes in studs to prevent splitting.
13. With the corner wall attachment complete, position the second rear wall panel in place so bottom 2x3 wall framing is sitting flush with outside floor framing. Wall siding should overhang floor by approximately 3/4". When positioned correctly, attach both wall panel studs together as per Step 12 with 3 - 2 1/2" screws.

14. With Rear Wall Panel in place, position other side wall panel on floor as per Step 10 & 11.

15. Secure side wall panel to rear wall panel as per Step 12. Next, locate a Narrow Wall Panel and position in front corner.
16. Once again position the 2x3 wall plate so it sits flush on floor and siding overhangs. **Note:** Narrow Wall Panel is only 73” high.

17. When correctly positioned, secure Narrow Wall Stud to Side Wall Stud with 3 - 2 1/2” screws.

18. Complete opposite Narrow Wall as per **Steps 16 & 17**.

19. Locate both **Door Headers - Short** (step facing up and out). Attach both short end pieces using 2 - 2 1/2” screws per piece. Screw from top down into wall framing. Align to inside of wall framing and tight against side wall.
20. Locate **Door Header - Long** (2” wide aluminum support attached already). Align step on header facing up and out and with support strip to the inside of shed. Attach using 2 - 2 1/2” screws per end as shown above. **Hint:** Have 2 helpers push Side Walls together to close any gaps between Headers. Complete both sides. Attach support strip to short headers with 2 - 3/4” screws.

21. Locate both **Vertical Door Jambs** (1 1/2" x 3 1/2" x 73") and position flush against front narrow wall stud. The Jamb will sit flush to outside of wall siding. When positioned correctly, secure Jamb using 6 - 2 1/2” screws. Complete both sides.

22. Locate an **Angled Wall Extendor** and **Top Siding Piece for Angled Wall Extendor (L/R)**. Position top siding on wall extendor and align as shown above. Attach with 3 - 1 1/2” finishing nails to top wall framing. There are left/right top siding pieces. Use rough surface side out. Place finished wall extendor on side wall panel frame. Complete both sides now. **Note:** Bottom siding of wall extendor will overhang and cover siding of side wall.
23. Align wall framing of Angled Wall Extendor and Side Wall so they are flush at the front. The siding for both walls should also align evenly from front to back.

24. With Angled Wall Extendor and Side Wall aligned correctly, secure together from the inside with 4 - 2 1/2" screws.

25. Complete opposite Angled Wall Extendor positioning and attachment as per Steps 23 & 24.
26. Locate one Wall Extendor and place on Door Header with extendor framing flush with inside edge of Header. Overhanging siding on front of extendor will rest in notch of Header.

27. Attach Wall Extendor to both the Angled Wall Extendor framing and the Door Header with 5 - 2 1/2" screws.

28. Position and secure 2nd Wall Extendor Panel as per Steps 26 & 27. Additionally, attach to first Extendor with 2 - 2 1/2" screws.
29. Align **Horizontal Wall Cleats** (1 @ 3/4” x 3 1/2” x 70”, 1 @ 3/4” x 3 1/2” x 21”) flush with top of Rear Wall framing. To help strengthen the Rear Walls, there is a short and a long wall cleat which meet off-center from the seam between walls. Attach Cleats with 8 - 1 1/4” screws.

**Advice:** Prior to fastening walls and installing rafters, take time to confirm your walls are level, square and plumb.

Measure diagonal at top and bottom of walls corner-to-corner. This should be approximately 99 1/4”. More importantly, if measurements are not within 1/4”, your walls are not square. Adjusting now will make it easier to install roof section.
30. To complete Wall Section, attach bottom 2x3 wall plates to plywood floor with 20 - 2 1/2” screws. Confirm Doorway opening is 64” wide. Prior to securing, make sure wall panels are aligned correctly on the floor. Refer to Step 11. Wall siding should overhang floor while 2x3 wall plates should sit flush with floor.

C. Rafter and Roof Section

Exploded view of all parts necessary to complete the Rafter and Roof Section. Identify all parts prior to starting.

- Metal Roof Panels (3)
- Facia Nailing Strips (2)
- Roofs Battens (3/4” x 3 1/2”)
  - 1@ 26”
  - 1@ 74”
  - 4@ 50”
- Rear Soffits (2) 3 1/2” wide
- Foam Enclosures
- Front Soffits (2) 3” wide
- Front Metal Drip Caps (2)
- Rafters (6)

Optional - Caulking seams will help prevent moisture from entering at seam. Caulking not included in kit.

Use 64” long Door Stop / Floor Threshold to confirm doorway opening.

Confirm Doorway opening is 64” wide at top and bottom.

Pilot Hole first.
31. Locate 6 Rafters, 2 Rear 3 1/2” wide Soffits and 2 Front 3” wide Soffits. Lay out on level ground and assemble as shown in Illustrations A through C below. Attach Soffit Boards flush to end of outside rafters with 2 - 1 1/4” screws per rafter end. **Important:** Drill pilot holes in Soffit ends to prevent splitting. Measure and attach interior Rafters as illustrated above. Measure and attach remaining Soffit/Rafter connections using 2 - 1 1/4” screws per rafter/soffit.

Note: We recommend you drill a 1/8” pilot hole for each screw, to avoid splitting wood. The hole depth should be equal to 3/4 the length of screw.
32. Carefully flip completed Rafter Section over so 3” wide Soffit is facing the front and place on walls. **Note:** once again, make sure 3” wide Soffit is positioned to the front of the shed.

33. Position completed Rafter Section on top of walls. Outside Rafters will sit on Extension Wall framing and be positioned equally from side to side.

34. When Rafter Section is positioned correctly, both Front and Rear Soffits will sit approximately 1/8" away from wall siding. This can vary slightly.
35. With Rafter Section correctly aligned, secure rafters to walls using 90° Metal Brackets. Start with outside rafters and secure 2 Brackets with 1 1/4” screws. Screw into Wall Extension Framing at the front, and Wall Panel top framing at the rear. Complete both sides.

36. With outside rafters properly secured, completely secure remaining interior rafters using 6 - 2 1/2" Screws. Screw into rafters from inside of Extension Wall framing at front of shed and inside Rear Wall framing at rear of shed, behind Horizontal Wall Cleats.

37. Position first row of Roof Battens (3/4” thick x 3 1/2” wide x 50” long x 2) on front of roof rafters. Place flush with rafter end. Batten will sit on evenly on center rafters overhanging 2” on the outside rafters. Attach batten with 1 - 1 1/4” screw per each rafter. Pre-drill with 1/8” drill bit first to prevent end from splitting. Complete attachments of both 50” long roof battens.
38. Position and attach 2nd row of battens 25 1/2” from bottom row of battens following Step 37. Second row of battens are 74” and 26” long. Start with long batten first.

39. Attach 26” batten to rafters as per Step 38.

40. Position and attach 3rd row of battens (2 @ 50” long) near the rear of the rafters following Steps 37-39. Space battens 25 1/2” away from middle rafter as shown above.
41. Center **Facia Nailing Strips** (2) (3/4” x 3/4” x 51”) underneath outside of each batten. Attach with 3 - 1 1/4” screws evenly spaced into the batten. The Facia Nailing Strip provides for a greater nailing surface later when you attach side facia.

42. Locate all **Metal Roof Panels** (*3 pcs x 39” wide x 55 1/2” long - Identical*). Place the first outside panel on rafters. Do not attach roof panel onto rafters until all panels are positioned and spaced. In the meantime, have your helper hold the panel in place so it doesn't slide off. Overhang the roof past the battens on the side and front by approximately 3/4”

43. Overhang the roof past the battens on the side and front by approximately 3/4”. The roof at the rear should overhang the battens by approximately 1”.
44. Position remaining metal roofs on battens aligning as per Steps 42-43. Overlap roof panels to achieve the desired overall width. Overall width past the end of battens can vary from 1" - 3".

45. Before attaching roof panels down, insert **Foam Enclosures** between roof panels and battens at the bottom of the metal roof panels in the rear. Enclosures will prevent moisture and unwanted bugs, etc from entering into your shed from here.
46. Using 2" Metal Screw and 3/8" Nut Driver (included), secure panels down to each batten. Metal screw is self tapping. Do not over tighten! Use 8 metal screws for now. Only attach into lower two battens rows. Four more 7/8” screws will be required to further secure roof panels and to complete **Metal Ridge Caps** in later steps.

**Note:** If Top Siding Pc. for Angle Wall was not installed in Step 22 it can be done now. Attach with 3 - 1 1/2” Finishing Nails per piece.
Exploded view of all parts necessary to complete the Skirting, Trim, Facia and Miscellaneous Pieces. Identify all parts prior to starting.

47. Attach **Bottom Skirting** (3/4” x 4 1/2” x 45 1/4” - bevel) around the base of the shed. Skirting will hide floor framing. Start with side skirting pieces first and attach with 4 - 1 1/2” finishing nails per piece.

**Important:** Illustrations show shed with Cedar and Metal Roof Panels and assembly is interchangeable.
48. Rear skirting pieces will meet together in the center. Secure with 4 - 1 1/2" finishing nails per piece.

49. Gaps on outside will be covered by Corner Trim pieces later. Complete front and side skirting attachments.

50. Use 6 nails on front skirting piece where doors will be installed. This adds extra support to a high traffic area.

51. Locate Corner Filler Trims (8 - 7/8" x 2 1/2" x 36") and Front Center Corner Filler Trims (2 - 7/8" x 2 1/2" x 10"). Fillers are essentially nailing strips and will not be visible once additional corner trims are attached later.
52. Attach **Corner Filler Trims** where gaps exist in rear corners (2 per side). Hammer with 8 - 1 1/2” finishing nails. Position bottom filler just below wall siding. Top filler just below soffit. Gap in middle.

53. Position and attach Corner Filler Trims in the front as per **Step 52**. There is an additional 10” long **Front Center Corner Filler Trim** that you will need to center and attach as well using 2 - 1 1/2” nails.

54. Locate **Vertical Door Trim** (2 - 1/2” x 3 1/2” x 77 1/2”). Position Door Trim flush with outside of narrow wall stud. Trim should be aligned just beneath Door Header. Attach with 8 - 1 1/2” finishing nails.
55. Position and attach opposite side Door Trim as per Step 54.

56. To completely trim out front corners, locate a Side Front Corner Trim (1/2" x 2 1/2" x 88 3/4") and a Front Corner Trim (1/2" x 5 1/2" x 88 3/4").

57. Place both trims in front corner and align as illustrated above. Do a dry run prior to attaching to achieve best fit. Start with 5 1/2" wide Front Corner Trim and align tight underneath soffit to determine vertical height. Attach with 8 - 1 1/2" finishing nails per piece. Position and attach Side Front Corner Trim (2 1/2" wide) using 8 - 1 1/2" finishing nails, aligning at bottom with wide trim.

58. To completely trim out rear corners, locate Side Rear Corner Trims (1/2" x 2 1/2" x 80") and Rear Corner Trims (1/2" x 5 1/2" x 79"). Align and attach as per Step 57.
59. Attach Rear Middle Trim (1/2" x 2 1/2" x 79") where wall panels come together at rear seam. Attach with 8 - 1 1/2" finishing nails aligning tight underneath soffit and center on seam.

60. Locate Horizontal Door Trim (1/2" x 2 1/2" x 88 1/4") and Front Middle Trim (1/2" x 2 1/2" x 8 5/8"). Position as shown above and attach with 1 1/2" finishing nails.

Important - Drill Pilot Holes to prevent splitting.

61. Attach Door Hinges to both Left and Right Side Double Doors. Position Hinges equally on door trim as shown above and attach with Black 3/4" and 2" screws.
62. With Hinges attached, position doors in opening. You will need some assistance to hold doors in place.

**Important - Drill Pilot holes to prevent splitting.**

63. Now secure the Double Doors. Starting with **Right Side Door**, position so there is a 1/2" gap on bottom, and approximately 3/8" on the side. Use a spare piece of siding or shingle to shim door in place at the bottom. Using 2" black screws, secure bottom hinge to Door Trim. **Hint:** Do not attach all the 2" screws until both doors are positioned correctly. You can use a Screw Driver to tighten screws completely so you don't over tighten.

64. Make sure Door Panel is aligned evenly at top and edge. When aligned correctly, attach top and middle hinges to narrow trim with 2" black screws.

65. Place second Door into position and attach as per **Step 63**. Make sure Doors can open and shut correctly prior to completely securing all hinge screws.
66. Locate and identify all Facia pieces: **Front & Rear Facia (4)** (1/2" x 4" x 50 1/2").
**Side Angle Cut Facia (2)** (1/2" x 4" x 54 1/8"). In front corner, align side and front Facia together. Front facia will cap side facia.

67. Do a dry run first before securing. Position Front Facia up underneath roof panel and against rafter ends. Have your helper hold in position. Place angle cut Side Facia underneath roof panel against Rafter/Facia Nailing Plate. Align so Front Facia caps Side Facia and then attach the front with 6 - 1 1/2" finishing nails. Attach side with 5 - 1 1/2" nails securing them into the nailing plate (closer to the top of the side facia board). Attach next piece of Front Facia. **Note:** With Front Facia correctly aligned at corners, a small gap may occur at center seam. This will be covered by Facia Detail Plate in **Step 70**.

68. Place and align rear and side facia for best possible fit with rear capping side facia. Attach facia to rafter ends with 6 - 1 1/2" finishing nails per piece. Complete both rear facia pieces.
69. Place **Front Metal Ridge Caps (2 pieces - 60” long)** on top of metal roof in the front. Evenly space from side-to-side allowing caps to overlap each other. Overhang the cap approximately 1” past each end. When ridge cap is correctly positioned, secure with 4 - 7/8” self tapping metal screws using 1/4” nut driver as per **Step 46**. Screw into top batten. Do not overtighten.

70. Attach **Facia Detail Plate** to cover seams where Rear Facia pieces come together. Secure with 4 - 1 1/2” finishing nails.

71. Attach **Upper Interior Door Trim (2)**

(1/2” x 1/2” x 28 7/8”) positioning 1st trim against door jamb and underneath door header flush to edges on inside as shown to the right. Attach with 4 - 1 1/2” finishing nails.

Toll Free 1-888-658-1658  www.outdoorlivingtoday.com  sales@outdoorlivingtoday.com
72. Attach 2nd upper interior door trim as per Step 71. Position and attach all Side Interior Door Trim (4) (1/2” x 1/2” x 35 7/8”) 2 per/side. Position against door jamb and underneath upper door trim. Attach with 4 - 1 1/2” finishing nails. Complete lower interior door trim and both side interior trims on other side.

73. Attach Upper Door Stop - dado cut (1 1/2” x 2 1/2” x 6”) underneath door header with 2 - 2 1/2 screws. Stop is pre-drilled on angle. Evenly space between trim.

74. Attach Lower Door Stop /Floor Threshold (3/4” x 2 1/2” x 64”) - between door jambs. Check door alignment first and then attach with 4 - 1 1/4” screws. Optional - caulk the lower edge of threshold to prevent water penetration.

75. Position and attach Interior Vertical Door Flange (1/2” x 2 1/2” x 70”) on inside door frame (left door from outside/right from the inside) using 6 - 1 1/4” screws. Position on inside edge of left door frame so Flange overlaps right door frame by about 3/4”.
76. To secure doors, you will need to install the **Interior Cane Bolt** to the Vertical Door Flange. First slide bolt through the upper and lower brackets. Usually the upper bracket is positioned between small nubs in the middle of the bolt. Use 3/4" black screws to secure. Screw on angle and make sure you attach to door frame. Pre-drill to prevent wood from cracking. Attach the holster high enough up so the handle holds the bolt a few inches above the door stop.

77. Once the Cane Bolt is attached, close doors and mark a hole in the stop to accommodate the bolt. You can bang the top of the bolt using a hammer and a block of wood to prevent damage. Once complete, open doors and drill hole where previously marked with 1/2" bit.

78. Attach **Door Handles**. Handles are positioned on top section of each door and mounted with 3/4" Black Screws.

79. Attach Black Barrel Bolt as illustrated above with 2" & 3/4" Black Screws. Note how female part of Barrel Bolt is positioned higher than male. Do a dry run first to position Barrel Bolt correctly. **Important** - Drill pilot holes with 1/8" drill bit prior to securing with screws to prevent wood splitting. On 3/4" screw, drill shallow pilot hole only.
We value your feedback and would like to hear back from you on how well we are doing in the following areas:

1. Customer Service
2. On Time Shipping
3. Motor Freight Delivery
4. Quality of Materials
5. Assembly Manual
6. Overall Satisfaction.

Congratulations on completing your 8x4 Garden Saver Double Door Shed!

Note: Our Sheds are shipped as unfinished products. If exposed to the elements, the Western Red Cedar lumber will weather to a silvery-gray color.
If you prefer to keep the cedar lumber looking closer to the original color, we suggest that you treat the wood with a good wood stain. You may also wish to paint your new shed rather than stain it. In both cases we recommend that you consult with a paint and stain dealer in your area for their recommendations.
